- **Cyber Security Course** FROM Arena Web Security
(Certificate - <http://bit.ly/3J5r2RZ>)
- Ranked 6th in Top 15 in **Laravel Career Path Course** in Interactive Cares

Education

- Bsc. In CSE
Daffodil Institute of IT, Dhaka.
Completed in December, 2022

About Me

Hard working software developer with promising capabilities in developing features and developing user interface. Committed to applying best technology practices and innovative methods in creating software.

Professional Experience

Hi-Tech Bangla (Bangladesh) LTD. | Software Developer

Location : Remote | Operational Area : USA

January 2024 – Present

- Worked on **HRM Project**
 - Implemented automated workflows for , employee login/logout tracking leave requests and approvals, reducing manual intervention and improving accuracy.
 - Developed the project management module of the HRM system, focusing on the project management aspect, ensuring accurate tracking of which employees worked on specific projects.
- Worked on **Coffee-explorationllc**
 - Developed secure login, registration, and password recovery functionalities, ensuring user data protection.
 - Implemented features for managing customer profiles, communication history, and service requests.
- Worked on **IDL Masjid ERP** (Ongoing)
 - **Finance management system** comprises a relational database with tables for users, accounts, and transactions. A RESTful API is developed to facilitate account management, transaction operations, and reporting.
 - Developed and implemented role-based access control (RBAC) strategies to regulate user permissions within the organization's systems and applications.
 - Donation Management (Database design, Create RESTfulApi)
- Worked on **Grocery App** (Ongoing)
 - Product CRUD operations enable the creation, retrieval, updating, and deletion of product records, which are categorized and subcategorized within the system.
 - Developed and implemented role-based access control (RBAC) strategies to regulate user permissions within the organization's systems and applications.

Prefeex LTD. | Software Developer

March 2023 – December 2023

- Worked on **Shoccho**(HRIS System)
 - Added functionalities for employee management, including adding new employees to the system, which improved HR operations.
 - Developed the leave module, streamlining the process for leave requests, approvals, and tracking.

Academic Project

1. Job Board

Feature:

- Admin Login
- Admin Dashboard , Company Dashboard
- Admin Can create Package
- Admin can create role and give permission to the role
- Company registration & login system
- After the account approval by admin the companies can start creating jobs
- Job CRUD
- By default a company will get a free package(Package post limit can be customize from admin panel) for posting jobs.
- Company can buy premium package Using SSL Payment Gateway
- Companies can set an 'expiration date' to a job. After the expiration date the job won't be visible publicly, but they can see the jobs in their dashboard.
- Records of 'Clicks' on the 'Apply' button and show it to the Companies in their dashboard.
- Records of 'Job post' views and show it to the Companies in their dashboard.
- Candidate registration & login system
- Candidates can 'subscribe' to the jobs by selecting 'Categories' and will get notified via email when any job is posted on the selected category.
- Admin can manage users, jobs etc. from their dashboard.
- Candidates can see available jobs in the website.
- Candidates can search the jobs by 'Tag', 'Location', 'Salary range' etc.

Github link: <https://github.com/dipto3/Job-Board>

2. Barta

Feature:

- User registration & login system
- Users can update their profile
- Authenticated user can post (Post CRUD)
- Like feature
- Comment feature (Comment CRUD)
- When someone likes OR comment a user's post, he/she will get an in-app real-time notification
- When someone comments on a user's post an event is triggered, he/she will get an in-app and email notification
- Show all users posts on Home feed
- Search functionality with user name, email, user name to find a user's profile

Github link: <https://github.com/dipto3/Barta>

3. Restful Api for URL shortener Service

Feature:

- User registration & login(returns API key using Sanctum) system
- Using the API key one can send a long URL and will get a shortened one in response. (If the long URL is already in the system, can't create a new shortened URL, return the previous one). Only the users with a valid API key can use this service.
- The user can see the list of URLs they registered using an Endpoint.
- If we browse any shortened URL in the browser, it should redirect us to the actual URL
